

SECTION 14: Detailed Directory

MANUAL FOR SEPTIC SYSTEM PROFESSIONALS IN MINNESOTA

DETAILED DIRECTORY

INTRODUCTION	1-1
How to Use This Manual	1-1
Understanding Septic Systems	1-1
Why Are Septic Systems Necessary?	1-1
What Do Septic Systems Do?	1-2
How Does a Septic System Work?	1-2
Plumbing.....	1-3
Septic tank	1-3
Soil treatment area.....	1-4
Enhancements.....	1-5
How Is The Sewage Treated?	1-6
Why Do Septic Systems Fail?	1-7
Improper maintenance	1-7
Overuse of water.....	1-7
Improper design or installation.....	1-7
Cleaning up a Sewage Back-up	1-8
Clean up tips:.....	1-8
Compliance Inspections	1-8
Abandonment	1-8
Operation and maintenance tips.....	1-9
Control water use	1-9
Eliminate harmful products from the system.....	1-9
Do not use additives.....	1-9
Regularly clean/pump and inspect the septic tank	1-9
Maintain pumps and filters properly	1-9
Protect the soil treatment area.....	1-10
Items to Keep Out of a Septic System	1-10

14-2 ■ DETAILED DIRECTORY

Odor Issues and Onsite Sewage Treatment Systems	1-11
1. Odors in the home.....	1-11
2. Odors near the septic tank	1-12
3. Odors near a pretreatment unit.....	1-12
4. Odors near the soil treatment area.....	1-12
5. Odors in the yard.....	1-12
Designer Responsibilities: Providing Information to the Homeowner.....	1-13
I. Pre-Design Communication.....	1-13
A. Pre-design meeting with system owner.....	1-13
II. Post-Design Communication	1-14
A. Final design review.....	1-14
B. Management Plan	1-14
Installer Responsibilities: Providing Information to the Homeowner	1-15
I. Pre-Installation Tasks	1-15
A. Agree on establishing the vegetative cover and topsoil.....	1-15
B. Septic System Management Plan (select one box).....	1-15
II. Post-Installation Tasks	1-16
A. Discuss ponding, run-off, and surfacing.....	1-16
B. Explain and show the system to the homeowner.....	1-16
C. Discuss household water and product use tips with the homeowner.....	1-18
Maintainer & Service Provider Responsibilities: Providing Information to the Homeowner	1-19
A. Septic system Management Plan	1-19
B. During service call, accomplish these tasks and discuss these topics with a homeowner.....	1-20
C. Communication with the homeowner.....	1-21
D. Discuss household water and product use tips with the homeowner.....	1-22
Household Product and Water Use Guidelines for Homeowners	1-22
More Information About Septic Systems	1-23
Local and Regional	1-23
State and National.....	1-23
Publications and DVDs	1-24
University of Minnesota Bookstore	
bookstores.umn.edu	1-24
For More Information	1-24
References.....	1-24

ADMINISTRATION

Federal Requirements.....	2-1
----------------------------------	------------

Overview.....	2-1
Management Guidelines.....	2-1
Class V Systems.....	2-2
Land Application Requirements	2-2
State Agencies	2-3
Overview.....	2-3
Minnesota Pollution Control Agency.....	2-3
Overview of Minnesota’s SSTS Rules	2-5
System Classifications	2-5
Type I systems	2-6
Type II systems.....	2-7
Type III systems	2-7
Type IV systems	2-8
Type V systems	2-10
Product development permits	2-10
Compliance Criteria.....	2-10
Imminent Threat to Public Health or Safety (ITPHS).....	2-12
Failing to protect groundwater	2-13
Cesspool, seepage pit, leaching pit, drywell.....	2-13
Limiting layer	2-15
Systems Not Operated or Maintained Properly.....	2-17
Systems with flows greater than 2,500 gpd.....	2-17
Compliance criteria for systems with partial component replacement	2-17
Non-Code System.....	2-17
Inspection Process	2-18
Disclosure vs. Inspection	2-19
7083 Certification and Licensing Requirements	2-20
Certification	2-20
Licensing Exemptions	2-20
Types of certification and corresponding responsibilities	2-21
Maintainer	2-23
Service Provider	2-23
Installer	2-23
Inspector	2-24
Training	2-25
Continuing education	2-25

Cut Areas.....	4-31
Soils, Impacts on ISTS Design	4-32
Soil Texture.....	4-32
Constructability	4-32
Smearing.....	4-32
Compaction.....	4-32
Soil structure - Preferential movement.....	4-32
Soil water movement.....	4-33
Unsaturated water movement	4-33
Saturated hydraulic conductivity	4-33

14-10 ■ DETAILED DIRECTORY

Determination of percolation rates of most restrictive horizon.....	4-35
The Percometer and the Hook Gauge.....	4-35
Percolation Test Data Sheet.....	4-36
Steps in a Percolation Test.....	4-36
Use soil observations to locate suitable area.....	4-36
Locate an adequate number of test holes.....	4-36
Dig the Test Holes.....	4-36
Prepare the Test Holes.....	4-37
Distinguish Between Saturation and Soil Swelling.....	4-38
Measure the Percolation Rate.....	4-38
Calculate the Percolation Rate.....	4-39
Groundwater mounding.....	4-39
Soil Loading Rate.....	4-39
Soil texture.....	4-40
Soil structure.....	4-40
Soil consistence.....	4-40
Percolation rate.....	4-40
Basic predictive assessment methods.....	4-40
Assumptions.....	4-40
Parameters.....	4-40
Application.....	4-40
Advanced assessment methods.....	4-41
Hydraulic Linear Loading Rate.....	4-41
Proper protection of tested area.....	4-41
Staking the Site.....	4-41
Special equipment needed.....	4-41
Equipment limitations.....	4-41
Traffic patterns to minimize compaction.....	4-41
Maximum lift/of typical pump trucks.....	4-42
Winter operation and protection from freezing.....	4-42
Site Evaluation Reporting Requirements.....	4-42
Soil and Site Additional Reporting [Over 2,500 gpd].....	4-43
Mounding evaluation.....	4-44
Method.....	4-44
Results.....	4-44
Nutrient evaluation.....	4-44

Problem soils assessment	4-44
Topographic and site variability evaluation	4-44
Soil property variation and interpretation	4-45
Water table monitoring basics	4-45
Equipment	4-45
Duration.....	4-45
Proper location.....	4-45
Problem Sites and Soils	4-46
Type I, II, III, IV, and V Systems	4-46
Rapidly Permeable Soils.....	4-46
Sands and Gravels	4-46
Loamy, Medium, and Fine Sands	4-46
Small Lots.....	4-47
General Description	4-47
Solutions	4-47
Reduce water consumption or reuse	4-47
Small field with holding tank	4-47
Pretreatment to reduced size drainfield.....	4-47
Time dosing from large pump tank	4-47
Box mound/vertical side wall mound.....	4-47
Lack of Unsaturated Soil	4-47
Pretreatment technologies	4-48
Reduced hydraulic linear loading rate	4-48
Texture break	4-48
Designed perimeter drain tile/curtain drain	4-48
Reduce water consumption or reuse	4-48
Disturbed Soil.....	4-49
Soil modification methods	4-49
Options.....	4-49
Excavate out the disturbed soil	4-49
Use of the disturbed soil	4-49
Manipulate the disturbed soil	4-50
Limitations.....	4-50
Effects	4-50
Design pressure distribution with varying elevation	4-50
Valving with management.....	4-50
